

```
1 TensorFlow may give types of "Module Not Found" errors if TensorFlow is not
  installed correctly.
2
3 In that case we have to remove and reinstall TensorFlow and Keras as Administrator
  using Python Package Installer (PIP). Please follow these steps.
4
5 STEP1:
6 -----
7 Close Spyder and any open Anaconda Navigator window.
8
9 STEP2:
10 -----
11 Then open Anaconda prompt and uninstall both keras and tensorflow using commands
12
13 conda uninstall keras
14
15 and
16
17 conda uninstall tensorflow
18
19 STEP3: Then close the anaconda prompt.
20 -----
21
22 STEP4:
23 -----
24 Then once again go to start >> anaconda prompt (Right click and select "Run as
  Administrator")
25
26 STEP5:
27 -----
28 Then run the commands to install TensorFlow and Keras using pip in the following order
29
30 pip install tensorflow
31
32 and then
33
34 pip install keras
35
36 STEP6:
37 -----
38 Then open Spyder and check if the same issue persists
```
